

Thank-you for expressing your interest in the Tremor^{MUV}. Please enjoy the information provided to you in this brochure.

ROCKY MOUNTAIN COACHWORKS LTD.

Our company was founded with the principle of coach building in mind. To understand what coach building is, you have to take a step back into automotive history.

This was a time when vehicles were handcrafted to the customers requirements. The customer would purchase the chassis from a builder, and take it to their coachbuilder of choice. Body style and features would be decided, and the result would be a very unique, one of a kind vehicle.

The concept of homebuilt or coach built vehicles can be traced back to the 1800's. These unique, and individually handcrafted vehicles were built to the customers personal tastes.

This is exactly what Rocky Mountain Coachworks offers! The detailed "blueprint" for you to construct your very own military styled vehicle. This "blueprint" gives you the flexibility to construct your vehicle to suit your personal requirements, while presenting the construction in a step-by-step process.

HAVING A TREMOR^{MUV} BUILT FOR YOU

If you feel that constructing your own Tremor^{MUV} from plans is beyond your current ability, there is an alternative available to you.

We encourage you to contact a local welding shop. They will undoubtedly be able to help you speed up the construction of your Tremor^{MUV} by welding the base body for you.

TREMOR^{MUV}

The most accurate
replica on today's
market.

THE TREMOR^{MUV} PLAN SET

The Tremor^{MUV} Plans cost US\$425 plus shipping, and can be purchased securely using your credit card through our website at <http://www.tremormuv.com>.

The Tremor^{MUV} plans consist of three items. The plans, the build manual and the build chronicle CDROM.

The Tremor^{MUV} plans consist of 176 pages of CAD (computer aided design) drawings, printed on 11" x 17" tabloid size paper, and professionally bound on the left side of the plan book. The Tremor^{MUV} plan set is broken down into 20 drawing series. Each drawing series consists of cut lists and drawings. The cut lists describe exactly what pieces of steel are required for this section of the build, how many of each are required and dimensional / angular measurements.

The Tremor^{MUV} build manual is 115 pages in length, spanning 43 chapters. The build manual begins by introducing you to the build concept and process. It then leads you through the decision making process in determining exactly what you want your Tremor^{MUV} to look like. Once you've made all of your decisions, the build manual then walks you through the construction process of the base body onto which all of the surplus donor parts are attached. Finally, it discusses the remaining construction and fitment work remaining in your project.

The Tremor^{MUV} Build Chronicle CDROM covers the entire build process of the Tremor^{MUV} prototype, from idea to completed truck. Over 2500 photographs each discussed in daily journal entries are included on the CDROM to give you a front row center view of the construction process. Over 50 minutes of VCD quality video, time lapse build video footage and much more, make up this 700+ meg CDROM.

The Tremor^{MUV} Build Chronicle CDROM can be purchased separately for only US\$29 which includes worldwide shipping. If after purchasing the CDROM, you'd like to purchase the full plan set, US\$25 will be credited towards the purchase of the plans, leaving an outstanding balance of US\$400 plus shipping.

WHAT IS A TREMOR^{MUV}

The Tremor^{MUV} (Military Utility Vehicle). The most authentic military-styled vehicle plans available in today's market.

Constructed from easy-to-follow plans and surplus parts, you can customize your vehicle project however you desire. Enjoy the resource material and support provided through our website. You'll quickly discover that a Tremor^{MUV} can affordably fit into your future.

The finished vehicle shown on the cover of this brochure is the actual Tremor^{MUV} prototype. See how it's virtually indistinguishable from a similar name-brand vehicle.

HOW MUCH CAN A TREMOR^{MUV} BE BUILT FOR?

A Tremor^{MUV} can be constructed for as little as US\$6,500, or as much as

US\$20,000. How inexpensively you construct your Tremor^{MUV} is closely tied to the style of Tremor^{MUV} you decide to construct, and your ability to find good deals on the parts you will use to construct your truck.

The most inexpensive Tremor^{MUV} you can build would be a four door soft top version, utilizing all second hand parts. Such a truck could easily be constructed for under US\$6,500.

The most expensive version of the Tremor^{MUV} would be either the four door wagon, or the 4 door slant back. The prototype pictured in this brochure was constructed sparing no expense. Virtually everything was replaced or purchased new, and includes things such as a satellite navigation system and a 2000 watt stereo system. Still, the file price tag was only US\$20,000.

THE TREMOR^{MUV} WEBSITE

The majority of the information about Rocky Mountain Coachworks Ltd and the products that we offer can be found on our company website. It is designed to provide you with as much information as possible about the Tremor^{MUV} and our related products. Making the decision to build a Tremor^{MUV} needs to be an informed one, and we strive to make sure everything is clear and understood before you begin your adventure.
